resulting from B. faecium bacterial infection (e.g. urinary tract infection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans derived peptides or antisense polypeptides. Pharmaceutical compositions and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faecium infections. The present sequence represents

The present invention relates to a new hyperblebbing Gram-negative bacterium genetically modified by one or more processes selected from down-regulating expression of one or more processes selected from peptidoglycan-binding activity by mutation of one or more gene(s) encoding a protein comprising a peptidoglycan-associated site. The invention is useful in a method of treatment of the human or animal body. The invention is also useful for protecting an individual against a bacterial infection. The invention has improved outer-membrane vesicle-bedding properties. Blebs are more easily made in higher yield from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention, and are more homogeneous in nature and can be more readily filter sterilised. The blebs can be made and harvested without the use of detergents such as deoxycholate, thus obviating chromatography purification and ultra centrifugation steps. Vesicles prepared from the purification have reduced particle size (allowing sterile filtration through 0.22 mum pores), increased batch homogeneity, and a superior yield. The present amino acid sequence represents a Moraxella catarrhalis protein,
                        Novel hyperblebbing Gram-negative bacterium that has been genetically modified by down-regulating expression of Tol genes, and/or attenuating peptidoglycan-binding activity useful for treating bacterial infection.
                                                                                                                                                Disclosure; Page 66; 71pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             described in the invention

The invention relates to an isolated interest of the compression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid, (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated are:

(2) the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular compliferation, or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for conjustion of the gene product or that has an activity against a biological pathway to which a proliferation, or that inhibits soliferation of an activity against a biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compunity of a culture comprising strains in which the gene or which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the culture or collection of strains; or (13) identifying the target of a compound that inhibits the captained collection of an organism. The antisense nucleic acids required for cellular proliferation of solate canning for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                  screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "74 DKYFEATQTVYEWCGVATQLLAAYILLFDEYNEKKASAQKDILIKVLDDGITKLNEAQKS 133

               RHAWM 1 (AAR99673), or Receptor for Hyaluronic Acid Mediated Motility, is a hyaluronan receptor protein which is involved in cell locomotion or motility and cell proliferation and transformation. Its amino acid sequence was deduced from a CDNA clone (AAT34499) obtd. from murine 3T3 cells and a genomic sequence (AAT34500) from a mouse fibroblast genomic library. 2 Alternative mRNAs for RHAWM 1 were found, RHAWM 1A (see also AAT34523) and RHAWM 1B (AAT34524), that had identical translated proprisons increased expression of RHAWM 1 protein is indicative of a poor prognosis for breast cancer. The protein can be used to suppress or control a timour by modulating the interaction of cell-associated RHAMM
                                                                                                                                                                                                                                                                                                                                                                                                 226

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                                                                 RHAMM 1-2a (AAR99675) is an alternatively spliced variant of RHAMM 1 (AAR99673) (receptor for hyaluronic acid mediated motility), a protein involved in cell locomotion or motility and cell proliferation and transformation. It differs from RHAMM 1 by an insertion of 25 amino acids see also AAR99674) between amino acids 54 and 55 of RHAMM 1, resulting from an alternatively spliced exon 2A (AAR34502). RHAMM 1, 2a is the isoform that is overexpressed in tumours. Determination of the level of RHAMM 1-2a in a sample can be used to assess the prognosis of a tumour suppress or control a tumour. The RHAMM 1.2a protein can also be used to associated RHAMM with its ligand

The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this pastent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        : |:|:: ::: | :: | 14 | | 15 | 16 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 | 174 |

The invention relates to novel protein complexes comprising a first and a second protein, or its derivative, fragment, homologue or variant. The second proteins are selected from given protein complexes, which are not defined in the specification. The variants are encoded by nucleic acids that the specification. The variants are encoded by nucleic acids that the specification complexes are nesful as targets for an active conditions. The protein complexes are useful as targets for an active conditions. The protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament or prevention of a disease or disorder. The sequence distance did not form part of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was corrected the did not form part of the printed specification but was

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to new Proteus mirabilis polypeptides and polymucleotides. The invention also relates to antibodies against the polypeptides, method of generating the polypeptides, method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polymucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial diseases, as bio-control agents for plants; This sequence represents a Proteus mirabilis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4 IVADKIVEVVKNALETADGALDLYNKYLDQVIPWQTFDETIKELSRFKQE-YSQAASVLV 62

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a polypeptide (I) which binds to hyaluronic acid (HA) and thereby inhibit the binding of HA to RHAMM teceptor hyaluronic acid mediated mctility), comprising an amino acid sequence of P16, P-16d, human P32, murine P32, murine S3, human S3, murine S7, human S7, murine V2 and human V2. Also described: (1) a pharmaceutical composition comprising (I); (2) an antibody which binds to (I) or to a polypeptide comprising murine V3 or human V3 amino acid sequence; (3) a vaccine composition for the treatment of multiple sclerosis, restenosis or diabetes mellitus, comprising an antigen for the antibody of (2); and (4) a method for treating multiple sclerosis, restenosis or diabetes mellitus, by administering (I), human or murine V3, or an antibody to these polypeptides. (I) has neuroprotective,

antiproliferative or antinflammatory compound. The methyl donor compound acts synergistically with the antiviral, antiproliferative or antinflammatory compound to provide an enhanced therapeutic effect with minimal side effects. In the antinflammatory compositions of the invention, the amount and the frequency of administration is lower than that required for the antinflammatory compositions of the methyl donor compound. Compositions of the invention can be used in the treatment of viral disease, proliferative diseases (e.g., cancer), and inflammatory diseases such as multiple sclerosis. The present sequence represents a peptide fragment of murine RHAMM (receptor for hyaluronic acid mediated mediated mediated is specifically claimed as the antilifammatory compound in an antiinflammatory composition of the invention for the treatment of multiple sclerosis

The invention relates to a polypeptide comprising an amino acid sequence of plot, P32, murine S3, human S3, murine S7, c selected from the sequences of P16, P32, murine S3, human S3, murine S7, human S7, murine V2 and human V2, all derived from the protein RHAMM (Receptor hyaluronic acid mediated motility) a cell surface target (Receptor hyaluronic acid mediated motility) a cell surface target protein that is regionse to injury. Also included are an antibody that 1) pathway on response to injury. Also included are an antibody that compositions for treating an inflammatory neurological disorder or compositions for treating an inflammatory neurological disorder or cidabetes mellitus (comprising the above amino acid sequence or an antigen for the antibody cited above) and treating an inflammatory neurological disease, disbetes mellitus or wounds (comprising cancer, kidney fibrosis, inflammatory dermatosis, inflammatory lung disease, obesity, lupus, cardiovascular disease, diabetes mellitus or wounds (comprising administering to a patient the above polypeptide or antibody. In the above method, the inflammatory neurological disorder is multiple or sclerosis, Parkinson's disease or Alzheimer's disease. The present sequence is a mouse RHAMM active protein fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RHAMM; receptor hyaluronic acid mediated motility; hyaluronic acid; HA; neuroprotective; vasotropic; antidiabetic; nootropic; antiarthritic; antiparkinsonian; antiinflammatory; osteopathic; dermatological; vaccine;

The present invention describes a polypeptide (I) which binds to hyaluronic acid (HA) and thereby inhibit the binding of HA to RHAMM (Irceptor hyaluronic acid mediated motility), comprising an amino acid sequence of P16. P-164, human P32, murine P32, murine S3, human S3, murine S7, human S7, murine V2 and human V2. Also described: (I) a pharmaccutical composition comprising murine V3 or human V3 amino acid sequence: (3) a vaccine composition for the treatment of multiple sclerosis, restenosis or diabetes mellitus, comprising an antigen for the antibody of (2); and (4) a method for treating multiple sclerosis, restenosis or diabetes mellitus, py administering (1), human or murine (V3) or an antibody to these polypeptides. (I) has neuroprotective, antiinflammatory, osteopathic, dermatological, antiarteriosclerotic, antiinflammatory, osteopathic, dermatological, antiarteriosclerotic, antiinflammatory, osteopathic, dermatological, antiarteriosclerotic, antiinflammatory, osteopathic, dermatological, antiarteriosclerotic, antianteriosclerotic, antianteriosclerotic, antianteriosclerotic, antianteriosclerotic, disease, parkinson's disease, arthritis and other inflammatory joint diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory diseases, cancer and metasteasis, and chronic and acute respiratory wound chaling. Murine RHAMM-related peptide, V-2.

26-SEP-2003 (first entry)

ABP97481;

```
The invention relates to therapeutic compositions comprising at least one methyl donor compound (e.g., vitamin B12) and an antiviral, methyl donor compound (e.g., vitamin B12) and an antiviral, antiproliferative or antinflammatory compound; the methyl donor compound acts synergistically with the antiviral, antiproliferative or antinflammatory compound; or compound to provide an enhanced therapeutic effect with minmal side effects. In the antiinflammatory compound in so lower than that required for the antiinflammatory compound in the absence of the invention, the amount and the frequency of administration is lower than that required for the antiinflammatory compound in the absence of the creatment of viral disease, proliferative diseases (e.g., cancer), and inflammatory diseases such as multiple sclerosis. The present sequence represents a peptide fragment of murine RHAMM (receptor for hyaluronic cid mediated mediated mediated mediated mediated mediated mediated mediated mediated milinflammatory compound in an antiinflammatory composition of the invention for the treatment of multiple sclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Composition useful for treating e.g. viral diseases comprises a combination of a methyl donor compound, and an anti-viral, anti-proliferative, or anti-inflammatory compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 10; Page 22; 70pp; English.

Mouse hyaluronic acid binding protein RHAMM.

ö

12-MAR-2002 (first entry)

```
The invention describes a method of treating a tissue disorder associated with response-to-injury process or proliferating cells in a patient, comprising administering a polypeptide (1) which binds hyaluronic acid (HA), an antibody which binds one of domains D1-D5 of Receptor for hyalauronan-mediated motility (RHAMMMMM) a polypeptide fragment encoding any of D1-D5 of RHAMM, or a vector which expresses antisense RHAMM, and the propertied fragment encoding any of D1-D5 of RHAMM, or a vector which expresses antisense RHAMM, and inflammatory neurological disorder such as Parkinson's disease, Alzheimer's disease, arthritis including rheumatoid arthritis, osteoarthritis, multiple sclerosis, inflammatory dermatosis (psoriasis), inflammatory bowel disease, stenosis, cancer, kidney fibrosis, inflammatory lung disease (e.g. emphysema, asthma, cystic fibrosis, inflammatory lung disease (e.g. emphysema, asthma, cystic fibrosis, to prevent scar and also for treating or preventing diabetes mellitus. The method is also useful for treating tissue transplantation adhesions, to prevent scar and also for treating tissue transplantation catheters), inflammatory diseases such as AIDS, myocardial and hepatic fibrosis, chronic cystitis, acute maskitis, gastritis, neghtitis, neghtic shock, thyroiditis, and retinopathy. This sequence represents a receptor for hyalauronan-mediated motility protein used in the method of treating a tissue disorder described in the invention
                                                                                                                                                                                                                                      Treating tissue disorder associated with response-to-injury process or proliferating cells in mammals, e.g. fibrosis, inflammation, by administering a compound that alters activity of transition molecules within a cell.
                                                                                             (TRAN-) TRANSITION THERAPEUTICS & DIAGNOSTICS IN
                                                                                                                                                                                                                                                                                                                                                                       Disclosure, Fig 50; 215pp; English

```

The invention relates to a conjugate comprising an hyaluronic acid (HA) binding protein e.g. RHAMM (receptor of HA mediated mobility) or peptide
contiguous with, or coupled to a polypeptide conjugated to a therapeutic
agent, and the polynucleotides encoding them. Also included is a method
for preparation of the HA-binding protein by inserting a first nucleotide
sequence encoding a HA-binding protein by inserting a first nucleotide
sequence encoding a therapeutic protein into a suitable
nucleotide sequence encoding a therapeutic protein into a suitable
vector, expressing the vector in an acceptable host, purifying conjugate
altering in vivo the distribution of a therapeutic agent comprising
administering the composition to the animal where conjugate molecule
distribute primarily in tissues and organs containing high levels of
cistribute primarily in tissues and organs containing high levels of
cistribute primarily in tissues and organs containing high levels of
cistribute distribution to the animal level of HA e.g. rheumatoid arthritis,
scleroderma, liver fibrosis and cancer. Lower therapeutic dosages
crequired also translates into lower immunogenicity of the conjugates
improve patient compliance and reduce direct and indirect costs
associated with the drug substance and its administration. Conjugates allows for the use, where appropriate, of lower, safer, dosages as compared to the conventional dosage requirements for the unconjugated corresponding therapeutic agent. Conjugate molecules have an increased half-life and potency, resulting in prolonged circulation of the molecule, efficient distribution into the target tissues, and increased bloavailability. The present sequence represents a RHAMM protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated

polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding consistence mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular consistence in an operon required for proliferation or the activity of agene in an operon required for proliferation, or that has an activity against a biological pathway to required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological identifying a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibicitic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent compound is activity; (11) a culture comprising strains in which the extent compound is activity; (11) a culture comprising strains in which the conformation of compounds are compound that inhibits the compound of an organism. The antisense mucleic acids are useful for strains; or (13) identifying the target of a compound that inhibits the compound of an organism. The antisense mucleic acids are useful for dentifying proteins or screening for homologous nucleic acids required for proliferation to isolate candidate molecules for rational for cellular proliferation in cells other than S. aureus, S. typhimurium, cequired for proliferation in cells other than S. aureus, S. typhimurium, cequired for proliferation in cells other than S. aureus, S. typhimurium, cequired the prince essential genes. Note: The sequence data for this patent did not form part of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince of the prince o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             226

The invention relates to constructing (M1) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying one allele by insertion or replacement by a casestet having an expressible selectable marker and modifying other allele by constructing other allele by the expression of the second allele is regulated by the promoter. (M1) is useful for constructing a strain of diploid fungal cells in which both alleles of a gene are modified. The diploid fungal cells in which both alleles modified are useful for identifying a gene that is essential to the survival or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian careivity of a gene product, preferably enzymatic activity, carbon compound catabolism, biosynthetic, transporter, transcriptional, carbon compound catabolism, biosynthetic, transporter, transcriptional, activity to inhibit growth or proliferation and cell division activity. The method is useful for identifying a compound having the antification by C. albicans. The present sequence is that of an essential Candida albicans protein used in the method of the invention.

Or sesential Candida albicans protein used in the method of the invention.

Or sesential candida albicans protein used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                103 EYNEKKASAQKDILIK--VLDDGITKLNEAQKSLLVSSQSFNNASGKLLALDSQLTNDFS 160

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus gyogenes), comprising one of 5481 sequences (S1), given in the specification. The proteins have entiabacterial and antihilammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be menightis. Nucleic acide encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                         Streptococcus, GAS, GBS, group B streptococcus, Streptococcus agalactiae, group A streptococcus, Streptococcus pyogenes, antibacterial; antinflammatory, infection, vaccine, meningitis, gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ΰ

The invention relates to a novel immunogenic composition comprising a combination of 2-5 group B Streptococcus (GBS) polypeptides. Each polypeptide is encoded by a GBS polynucleotide sequence which is homologous to a polynucleotide sequence of group A Streptococcus (GAS), Streptococcus pneumoniae and/or least one other GBS serotype. The composition of the invention demonstrates antibacterial activity whilst the polypeptides and polynucleotides may be useful in assays to diagnose and identify streptococcal infections or for identifying, screening and developing vaccines and other treatments for streptococcal infections. The current sequence is that of a Streptococcus agalactiae ORF SAG protein of the invention.

Bach polypeptide is encoded by a GBS polynucleotide sequence which is homologous to a polynucleotide sequence of group A Streptococcus (GAS), Streptococcus pneumoniae and/or least one other GBS serotype. The composition of the invention demonstrates antibacterial activity whilst. the polypeptides and polynucleotides may be useful in assays to diagnose

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel immunogenic composition comprising a combination of 2-5 group B Streptococcus (GBS) polypeptides. Bach polypeptide is encoded by a GBS polymucleotide sequence which is homelogous to a polymucleotide sequence of group A Streptococcus (GAS),
and identify streptococcal infections or for identifying, screening and developing vaccines and other treatments for streptococcal infections. The current sequence is that of a Streptococcus agalactiae ORF SAG protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for treating or preventing

       composition of the invention demonstrates antibacterial activity whilst the polypeptides and polynucleotides may be useful in assays to diagnose and identify streptococcal infections or for identifying, screening and developing vaccines and other treatments for streptococcal infections. The current sequence is that of a Streptococcus agalactiae ORF SAG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Zyskind JW;

The invention relates to an isolated nucleic acid comprising any one of the foll antisense sequences given in the specification where expression to the ancleic acid inhibits proliferation of a cell. Also included are: cof the nucleic acid inhibits proliferation of a cell. Also included are: cocding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular contisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular polyleration; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway continged for proliferation or that inhibits cellular proliferation; (8) inhibiting a centifying a gene required for cellular proliferation or the biological continged for proliferation. The antibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compount of an organism acts; (1) aculture compound that inhibits proliferation of an organism. The attrisense nucleic acids are useful for the decidentifying proteins or screening for homologous nucleic acids required for cellular proliferation of an organism. The antisense nucleic acids are useful for the decident confidence more and activity; (1) activity of the strains is present in a culture or collection of an organism. The antisense nucleic acids are useful for the decident decidence more and organism or for screening for homologous nucleic acids required for an organism. The arreason and promoted acids are useful for the decidence or the antisense and acids are useful for the provery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a array. A method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the activity of one or more of the cattivity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating complyablides or their antibodies. The polypurcleotide or the compound that modulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polynucleotide or the compound injury (CCI) and spared nerve injury (Numg), chronic constriction injury (CCI) and spared nerve injury (Numg) in an animal (e.g. spinal segmental nerve injury (Numg)) in an animal to the printed sequence data for this patent did not form part of the printed specification, but was obtained in alectronic form directly from WIPO at specification, but was obtained in alectronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

The invention discloses a composition comprising two or more isolated rattor human polymuclectides or a polymuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nuvel polymuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymuclectide sequence
New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially
                                                                                                                                                                                              Claim 1; Page; 1017pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    6-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -JUN-1999
  expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for producing a pharmaceutical composition, a cartivity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that polypeptides or their antibodies. The polymucleotide or the compound that polypeptides or their antibodies. The polymucleotide or the compound that collypeptides or their antibodies. The polymucleotide or the compound that paint (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from NIPO at (ftp. wipo.int/pub/published_pot_equences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1989 OKDEDATKGNEAQAVEHHKKAQAELSSFKILLDDTOSEAARVLADNEKEKKELQSNKESI 2048

REPLING CONTROL CARTON E (H1yE, ClyA, SheA): X-ray crystal structure of membrana do Sheavation of membrane pores by electron microscopy.";

REPLING CONTROL TOXIN, which has some hemolytic activity towards mammalian cells. Acts by forming a pore-like structure upon contact with mammalian cells.

CONTROL CONTROL CONTROL CARTON Secreted. Exported from an octamer. While in outer membrane vesicles, it oligomerizes to form a pore structure that is active. Probably forms an octamer.

CONTROL SUBCELULAR LOCATION: Secreted. Exported from the cell by outer membrane vesicles. Also found in the periplasmic space.

CONTROL CONTROL DATION Secreted. Exported from the cell by outer membrane vesicles. It is activated by SlyA, while it is silenced by H-CONTROL DATION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION SECRETION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                            similarity).

PTM: In periplasm, it forms a disulfide bond, which prevents the oligomerization. In outer membrane vesicles, the redox status prevents formation of the disulfide bond, leading to oligomerization and pore formation (By similarity).

SIMILARITY: Belongs to the hemolysin E family.
                                                                                                                                                                                                                               SUBCELLULAR LOCATION: Secreted. Exported from the cell by outer membrane vesicles. Also found in the periplasmic space (By
                                                                                                                                                                                   monomer, while in outer membrane vesicles, it oligomerizes to a pore structure that is active. Probably forms an octamer (By

In outer membrane vesicles, the redox status prevents formation of the disulfide bond, leading to oligomerization and pore formation (By similarty). SIMILARITY: Belongs to the hemolysin E family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBCELLULAR LOCATION: Secreted, Exported from the cell by outer membrane vesicles. Reingold J., Starr N., Maurer J., Lee M.D.;
"Identification of a new Escherichia coli She haemolysin homolog in
avian E. coli.";
PTM: In periplasm, it forms a disulfide bond, which prevents to oligomerization. In outer membrane vesicles, the redox status prevents formation of the disulfide bond, leading to oligomerization and pore formation (By similarity). SIMILARITY: Belongs to the hemolysin E family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Escherichia coli.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17:
